facades**

LITEX[®] PIX

Brilliant colours in a new light.
HD through digital printing on glass.

Glass clarity. Designed transparency.

Digital printing on glass allows what has to date been unimaginable forms of design on facades, partitions and foyers. As an individual accent in modern rooms, photo-prints on glass give a coloured brilliance and play with transparency and refraction in the material. For everyone's affordable unique pieces such as POS, displays and advertising, LITEX PIX makes them easily possible.

ECKELT also offers LITEX PIX in insulating glass units. Large scale designs for facades are no longer restricted to your fantasy.

The maximum size is 2000 x 4000 mm. Special sizes are possible upon request.

Proven practical suitability

The abrasion resistance and water fastness of LITEX PIX have been positively tested by methods in similar glass standards. Even cleaners containing solvents couldn't damage the thermo-fixed digital print.

Our general cleaning and maintenance guidelines are to be followed.
